- **Type of Research**

Pure Basic Research

Experimental and theoretical work undertaken to acquire new knowledge without looking for long term benefits other than the advancement of knowledge.

Strategic basic research

Experimental and theoretical work to acquire new knowledge directed into specified areas in the expectation of useful discoveries. It provides knowledge necessary for the solution of recognised practical problems.

Applied research

Original work undertaken primarily to acquire new knowledge with a specific application in view (either to identify uses for basic research findings or to determine new ways of achieving specific and predetermined objectives).

Experimental development research

Systematic work, using existing knowledge gained from research or practical experience for the purpose of creating new or improved products/processes.
